8 x 57mm (JS) Mauser

Test Specifications:

Firearm Used: M48 Mauser

Barrel Length: 23"

Twist: 1 x 10"

Components:

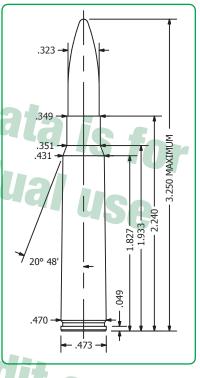

Case: Remington

Trim-to Length: 2.230"

Primer: Remington 9 1/2

Remarks:

The 8mm Mauser, also known as the 7.92x57mm, is one of the truly great military cartridges. Adopted in the Model 88 commission rifle, the 8mm Mauser was the first successful rimless military cartridge. Designated as the 8x57mm(J), the cartridge used a .318" diameter, 227 grain roundnose bullet at around 2100 fps. In 1905, the cartridge was revised to give much higher velocities and consequently, substantially flatter trajectories. The redesigned

cartridge used a pointed 154 grain bullet of slightly larger (.323") diameter at 2880 fps. While this may not sound radical by today's standards, in 1905 it was revolutionary. Designated as the 8x57(JS), the new high-velocity round made accepted infantry tactics of the time obsolete overnight. This set off a massive race among the ordnance departments of every major world power to keep pace with the German developments. In the United States, introduction of the 8x57(JS) caused us to revise the 30-03 cartridge, adopted only two years earlier, to the updated 30-06 design so well known today.

As a sporting cartridge, the 8x57mm will handle the same range of big game as the venerable 30-06. In the United States, reloading for any 8mm cartridge has been somewhat handicapped by a limited selection of bullets. While not as diverse a selection as the .30 caliber line, Sierra offers four bullets suitable for the 8x57(JS). The 150 grain Spitzer is probably the best all-around choice for deer-sized game, while the heavier 175 grain Spitzer is a good choice for larger game. Sierra's 200 grain MatchKing is the first U.S. made match bullet in this bore size, and will wring out the best accuracy potential of a good 8x57mm rifle. Due to the changes in bore diameter (the .318" J version vs. the later .323" JS version), caution should be used in loading for any 8mm Mauser that has not been thoroughly checked. No German military rifles manufactured after 1905 used the .318" bore, but if any doubt exists, have the bore slugged by a competent gunsmith.
