20 TACTICAL

Test Specifications:

Firearm Used: Universal

Barrel Length: 24"

Twist: 1-11"

Components:

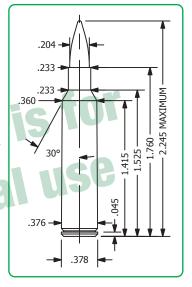

Case: Reformed Win 223 Rem

Trim-to Length: 1.750"

Primer: WSR

Remarks:

Twenty caliber cartridges have been with us for over a century but, generally, enjoying limited success. Things have changed in recent years, however, with over a dozen wildcat and factory offerings and as many custom and factory manufacturers chambering rifles.

and some handguns, for them. Of the lot, I've developed a particular fondness for one of them: the .20 Tactical. It has always seemed to me to be the most practical of all of them.

The .20 Tactical was developed in 1998 by Todd Kindler, proprietor of The Woodchuck Den, Inc., a retail/mail order firm specializing in products for small bore cartridges. It is the .223 Remington case necked down to .20 caliber with the neck lengthened slightly, the shoulder set back and sharpened to 30 degrees and the body blown out to reduce the taper. Unlike the parent .223 Remington with its maximum average pressure limit of 55,000 psi, the .20 Tactical's pressure is established at 63,000 psi.

Benefits, its fans will tell you, are numerous. A very light recoil allows the shooter to see the target being hit (or missed). Low noise derived from a relatively small powder charge in a small capacity case coupled with a long barrel keeps landowners happy. To this, light bullets cost less than heavier ones and the small charges stretch our powder budget.

The essence of the .20 Tactical is in the numbers; the Ballistic Coefficient numbers, specifically. Most .20 caliber bullets run from 32 to 40 grains with b.c. numbers ranging from .221 to .287. To reach those upper levels, .22 calibers bullets must exceed 60 grains. The lighter .20 caliber bullets can be propelled faster, tend to shoot flatter with less wind drift and do it quieter and at less cost.

I've had the opportunity to work with two .20 Tactical rifles at the range and in prairie dog towns. Accuracy has been consistently outstanding. Several bullets have impressed me but none so much as the Sierra 39 grain Blitzking. If you haven't experienced a .20 caliber in the field, I suggest you try a .20 Tactical.
